

LEARNING PILLOWS AND SNOEDELS

Learning Pillows were invented, designed and created by Jane Kronheim, an educator of young blind and visually impaired children. The first Learning Pillow was completed in 1984. She is still designing and sewing and growing with each new year.

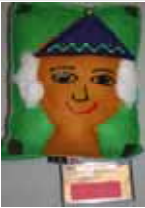

Each Learning Pillow is approximately 8 1/2 inches by 11 inches. The pillows are made of felt and feature raised bumps, lines, shapes, strong visual and tactual images and objects. They are colorful and provide strong contrast. Excellent for eye/hand coordination, tactual and visual discrimination, memory, pre-reading including pre-Braille skill development, buttoning, zipping, etc. There is so much you can learn with a Learning Pillow! Each pillow has a written story/text inserted inside the packaging. Cassettes are available for some pillows.

Mr. Bug Tries to Hide features a finger puppet character that searches around for a hiding place inside pockets, under a hat, or beneath a zippered pouch. Has a story and parent/teacher activity guide on cassette. **Pillow \$28.00 Cassette \$10.00**

Mr. Bug Goes for a Walk features a finger puppet that moves left to right on various textured pathways. Lots of surprises and noises here! Has story and parent/teacher Activity Guide on cassette. **Pillow \$28.00 Cassette \$10.00**

The King and His Closet is the most popular Learning Pillow. The King has many hats that can be placed on his head, on corners of the pillow, or in the closet. Lot of fun and giggles here!! **Pillow \$40.00 Cassette \$10.00**

Queen Viki Learning Pillow

Queen Viki and Her Hat Shop! This is a new Learning Pillow featuring hats and dress-up concepts. Your child or student will also learn a great deal about concepts such as long, longer, and longest! Each hat fits comfortably on Queen Viki's head. Many children have discovered their favorite hat! **Pillow \$40.00 Cassette \$10.00**

Boo Boo Bug

"This is a little bug that is on a travel route around the pillow. He doesn't always pay attention to what he is doing and so he often gets booboos!" He needs to pay attention, let's help him find his way. **Pillow \$28.00 No Cassette Available**

The Visual Hand Display (VHD)

The Visual Hand Display (VHD) was designed and created by Jane Kronheim, educator and artist. It was developed and researched in Boston in 1988 at Children's Low Vision Centre. One side of the VHD features vertical black and white stripes used to access visual responses at varying distances. The flip side features a girl's face, which is very attractive and appealing to young infants who are interested in facial features. On this side, a squeaker is stitched below the surface, safely tucked away within the inner fabric of the VHD. There are 4 sizes of stripes available. The wide stripes are the most popular. **\$40.00**

Snoedel

What is a Snoedel you ask? Well it is a unique doll like bonding and sleeping aid developed by Jolande Thomas. When a parent holds Snoedel close, it picks up the scent of the parent. Then when Snoedel is placed in the crib, the baby becomes aware of the scent to feel comforted that mom or dad (or grandma or grandpa) is near. Hospitals have found the Snoedel helpful for premature babies who are often separated from their parents and may benefit from having the scent of mom or dad next to them. Approximate size 18" X 18" **\$22.00**
